Position: Quantitative Researcher - Equities

Target Organization: IMC (London, United Kingdom)

Job URL: <https://www.imc.com/us/careers/jobs/4588833101>

Dear Hiring Team & Leadership at IMC,

I am writing to present my candidacy for the Quantitative Researcher - Equities position at IMC.

As the architect and developer of AURA (<https://www.auratrading.org/>), a proprietary 24/7 automated algorithmic trading and execution architecture spanning live crypto spot and equity markets, I combine deep quantitative software engineering with rigorous mathematical modeling and high-throughput system design.

My quantitative background encompasses building continuous walk-forward optimization pipelines, successive halving parameter selection, multi-regime volatility detection, and multi-layered risk management engines featuring dynamic stop-loss/take-profit triggers and PAXG defensive overlays. I architect low-latency execution pipelines using modern Python 3.11 (AsyncIO, NumPy, pandas) and C++, interfacing directly with high-frequency exchange APIs (CCXT, WebSockets) and maintaining 24/7 reliability via Linux systemd daemons and telemetry watchdogs.

In addition to quantitative finance, my track record in full-cycle product engineering (e.g., EduTrace at <https://edutrace.net>) underscores my disciplined approach to data structures, offline-first local state management, and multi-model AI workflows. I maintain rigorous test harnesses and analytical telemetry to ensure flawless runtime execution under high-stress market conditions.

I am eager to leverage this proven algorithmic engineering rigour, quantitative modeling acumen, and low-latency infrastructure design to drive outsized returns and system resilience for IMC's quantitative strategies.

Sincerely,

Ahmet Halit Ünsal
